

TC011 Explainability UI Popover

Work Item ID: 1573

Description: Verify clear and understandable natural language explanation rendering for AI insights

Precondition: AI generated insights are visible on screen.

Test Step: 1

Test Step Description: Click 'Request Explanation' hyperlink on an active trend item card.

Test Step Expected Result: System renders a popup window containing mathematical contribution factors in clear, plain text format.

TC014 Performance - Massive Dataset SLA

Work Item ID: 1573

Description: Verify system model execution engine generation times under maximum transaction volume

Precondition: Large metrics table available.

Test Step: 1

Test Step Description: Trigger standard AI insight generation routine across the complete dataset.

Test Step Expected Result: Model operations compute prioritization rules fully within the 5-second GDPR system boundary SLA limit parameters.

TC017 Negative - Corrupted Data Stream

Work Item ID: 1573

Description: Verify model graceful exception routing when analytics data streams arrive corrupted

Precondition: Data broker online.

Test Step: 1

Test Step Description: Pump malformed data frame array structure blocks into the analytics engine input hooks.

Test Step Expected Result: System catches parsing execution exception, prevents analytical cluster crash, and flags logging console with 'ERR-ML-DATA-PARSE'.

TC020 Feedback Loop Update

Work Item ID: 1573

Description: Verify recommendation algorithm adapts dynamically based on user explicit feedback

Precondition: Historical model weights updated.

Test Step: 1

Test Step Description: Submit explicit negative feedback rating tag to active recommendation engine array.

Test Step Expected Result: Database logs user rejection tag; future dashboard evaluation matrices systematically down-prioritize similar model recommendations.
